Thank you for purchasing **Mellis** - Beauty & Spa HTML Template . If you have any questions that are beyond the scope of this help file, please feel free to email, via my user page contact form or put a ticket at Support Center .

Thankyou so much!

## Template Features

- ✓ Clean & Simple Design
- ✓ Advance Bootstrap 5.x Framework
- ✓ HTML5 & CSS3
- ✓ CSS3 Animations
- ✓ Fully Responsive Design
- ✓ All files are well commented
- ✓ Crossbrowser Compatible with IE10+, Firefox, Safari, Opera, Chrome
- ✓ Extensive Documentation

## HTML Structure

The html template uses Latest **Bootstrap v3.3.4** with valid HTML5 tags. This theme is a responsive layout with 4 column Support column. All of the information in content area is nested within a class and comes with predefined classes.

## Basic Grid HTML

For a simple two column layout, create a .container and add the appropriate number of .col-md\* columns.

Given this example, we have .col-md-4 and .col-md-8, making for 12 total columns and a complete row.

```
code source
1. <div class="thm-container">
2.   <div class="col-md-4">...</div>
3.   <div class="col-md-8">...</div>
4. </div>
5.
```

## Nesting Columns

To nest your content with the default grid, add a new .container and set of .col-md\* columns within an existing .col-md\* column. Nested rows should include a set of columns that add up to the number of columns of its parent.

```
code source
1. <div class="thm-container">
2.   <div class="col-md-9">
3.     Level 1 column
4.     <div class="row">
5.       <div class="col-md-8">Level 2</div>
6.       <div class="col-md-4">Level 2</div>
7.     </div>
8.   </div>
9.
10.  <div class="col-md-3">
11.    Level 2 column
12.  </div>
13. </div>
```

## CSS Files And Structure

Mainly three main CSS files are used in this theme. The first one **bootstrap.css**, second one is **style.css** which for this template and third one is **responsive.css** to control responsive layouts.

If you would like to edit a specific section of the site, simply find the appropriate label in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

These are the css files that are loaded into templates in top of style.css file labled as **imported css**.

```
code source
1. @import url(bootstrap.min.css);
2. @import url(bootstrap-select.min.css);
3. @import url(owl.carousel.css);
4. @import url(owl.theme.default.min.css);
5. @import url(nouislider.css);
6. @import url(nouislider.pips.css);
7. @import url(jquery.bootstrap-touchspin.css);
8. @import url(magnific-popup.css);
9.
10. @import url/animate.min.css;
11. @import url(hover-min.css);
12. @import url(..../plugins/fontawesome-5/css/fontawesome-all.min.css);
13. @import url(..../plugins/icomoon/css/icomoon.css);
14. @import url(..../plugins/Mellis-icon/style.css);
15.
```

## Fonts

By default, the template loads this font from Google Web Font Services, you can change the font with the one that suits you best.

```
code source
1. @import url(https://fonts.googleapis.com/css?family=Quicksand:200,300,400,600,700,800,900);
```

## Jquery And Javascript

This theme imports three types of Javascript files.

jQuery  
Custom scripts (**custom.js**)  
Some plugins

**jQuery** is a Javascript library that greatly reduces the amount of code that you must write.  
Most of the animation in this site is carried out from the customs scripts. There are a few functions worth looking over.

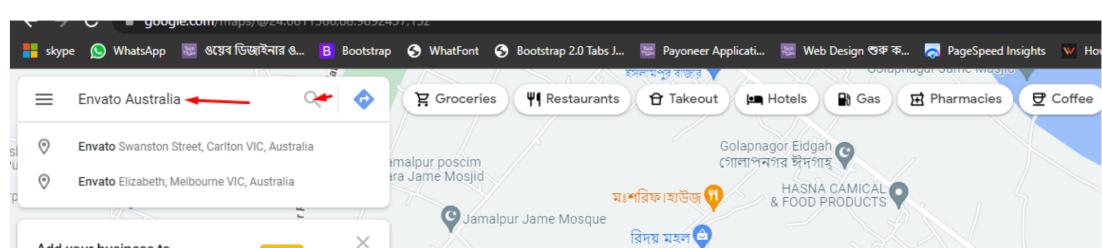

In addition to the custom scripts, I have implemented few "tried and true" plugins to create the effects. This plugin is packed, so you won't need to manually edit anything in the file. The only necessary thing to know is how to call the method

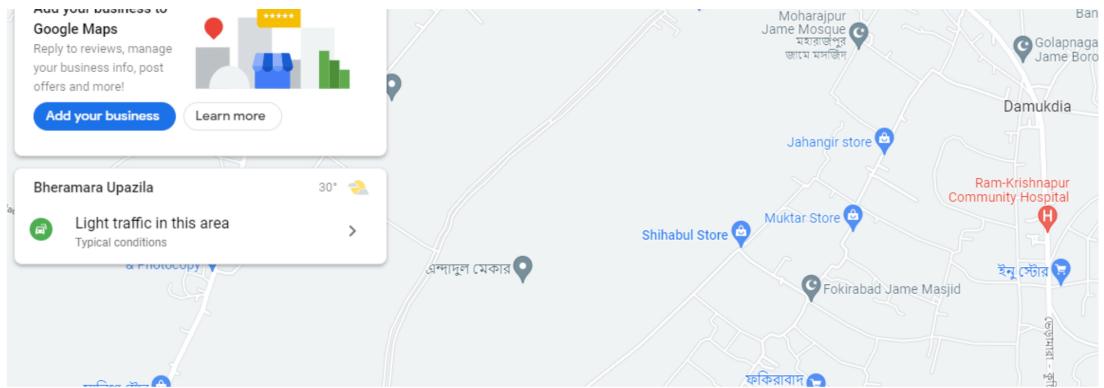

These are the JS files that are loaded into templates in end of the Body Section.

```
code source
1. <script src="js/jquery.js"></script>
2. <script src="js/bootstrap.min.js"></script>
3. <script src="js/bootstrap-select.min.js"></script>
4. <script src="js/jquery.validate.min.js"></script>
5. <script src="js/owl.carousel.min.js"></script>
6. <script src="js/isotope.js"></script>
7. <script src="js/jquery.magnific-popup.min.js"></script>
8. <script src="js/waypoints.min.js"></script>
9. <script src="js/jquery.counterup.min.js"></script>
10. <script src="js/wow.min.js"></script>
11. <script src="js/jquery.easing.min.js"></script>
12. <script src="js/custom.js"></script>
13.
```

## Google Map Settings

We used embed google map with ifram to get your map iframe code go to [Google Map](#) Then search your desire location See screenshot below

After That click to Location name and click on share see screenshot below

**Envato** 3.3 ★★★★☆ (198)

## Mailchimp Settings

We have added an attractive and fully functional Mailchimp form. You need to update the Mailchimp api and list id.

You have to add mailchimp popup form URL. You can find mailchimp dashboard

```

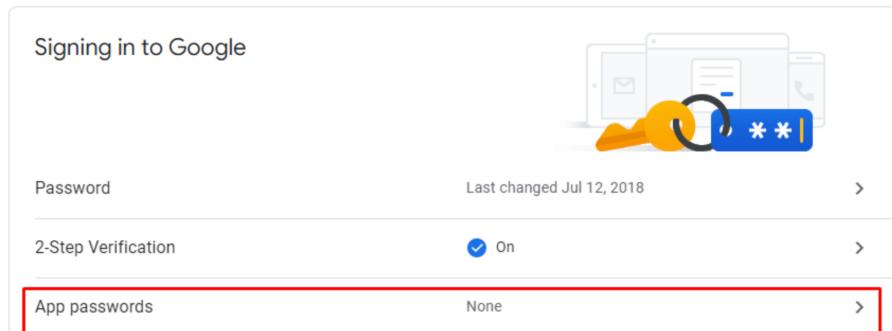

<ul class="footer-widget__links list-unstyled">
    <li><a href="#">Help </a></li>
    <li><a href="#">Support </a></li>
    <li><a href="#">Clients </a></li>
    <li><a href="#">Contact </a></li>
</ul><!-- /.footer-widget__links -->
</div><!-- /.col-lg-6 -->
<div class="col-lg-4">
    <div class="footer-widget footer-widget__mailchimp">
        <h3 class="footer-widget__title">Subscribe</h3><!-- /.footer-widget__title -->
        <form action="" class="footer-widget__mc-form-mc-form">
            <input type="text" id="mc-email" class="form-input" placeholder="Email address">
            <button type="submit"><i class="fa fa-location-arrow"></i></button>
        </form><!-- /.footer-widget__mc-form -->
        <div class="mc-form__response"></div><!-- /.mc-form__response -->
    </div><!-- /.col-lg-4 -->
</div><!-- /.row -->
</div><!-- /.container -->
<div class="site-footer__upper">
    <div class="site-footer__bottom">
        <div class="container">
            <div class="inner-container">
                <p class="site-footer__copy">&copy; copyright 2019 by <a href="#">Layerdrops.com</a></p>
                <!-- /site-footer__copy -->
            <div class="site-footer__social">
                <!-- /site-footer__social -->
            </div>
        </div>
    </div>
</div>

```

add your mailchimp popup form url here

## Contact Form Settings

We have added an attractive and fully functional contact form. We used [PHP Mailer](#) with Google SMTP Service. You have to add your gmail email and App Password to get email to your inbox. You must have to enable 2 step verification in your gmail then you have to create an app password from Your [Google account manager](#) From There click on App passwords. See screenshot Below:

After that They may ask you to login then you will get A Password Manager Form There you have to Select App (Mail) and device (Other Custom Name) Follow Screenshot below

### ← App passwords

App passwords let you sign in to your Google Account from apps on devices that don't support 2-Step Verification. You'll only need to enter it once so you don't need to remember it. [Learn more](#)

You don't have any app passwords.

Select the app and device you want to generate the app password for.

Select app

Mail

Calendar

Contacts

YouTube

Other (Custom name)

Select device

GENERATE

Give The name like InsurHTML SMTP Credentials

You don't have any app passwords.

Select the app and device you want to generate the app password for.

Mail

Select device

iPhone

iPad

BlackBerry

Mac

Windows Phone

Windows Computer

Other (Custom name)

GENERATE

After That Click on Generate And Then You Will Get Your SMTP Password

You don't have any app passwords.

Select the app and device you want to generate the app password for.

Site SMTP

X

GENERATE

### Generated app password

Your app password for your device

[REDACTED] O [REDACTED] :yc

#### How to use it

Go to the settings for your Google Account in the application or device you are trying to set up. Replace your password with the 16-character password shown above. Just like your normal password, this app password grants complete access to your Google Account. You won't need to remember it, so don't write it down or share it with anyone.

DONE

Now You have to fill up the credentials to your project **sendemail.php** Can be located at **assets/inc/sendemail.php**

Now Add your gmail email address and password (App Password Which Generated Before) to **SMTP\_EMAIL & SMTP\_PASSWORD** see screenshot below.

```
6 // Define SMTP Credentials // Gmail Informations
7 define("SMTP_EMAIL", "mail@gmail.com");
8 define("SMTP_PASSWORD", "your_gmail_pass"); // read documentation
9
10
```

Then Update the **RECIPIENT\_EMAIL** and **RECIPIENT\_NAME** Where you will get that email You can give same gmail or other email here to get your user emails.

```
11 // Define Recipient Info // Who will get this email?
12 define("RECIPIENT_NAME", "John Doe"); -----^
13 define("RECIPIENT_EMAIL", "jhon@mail.com"); -----^
14
15
16
```

Also There is some recommended info you should update to match the site information like **HOST\_NAME**, **HOST\_EMAIL**

```
3 // Define Host Info // Who is sending emails?
4 define("HOST_NAME", "Poitech Mailer"); -----^
5 define("HOST_EMAIL", "poitech@mail.com"); -----^
6
7 // Define SMTP credentials // Gmail/Tutanota
```

The Most important Thing is You have to give **Google SMTP** credentials other wise it will not work.

## Tutorial

### LOGO

Lets start updating the template. Open index.html file and follow the steps.

Most of the updates are same for all pages. So will explain once here.

```
code source
1. <a class="navbar-brand" href="index.html">
2.   
3.
4.
```

Replace "images/logo.png" with your logo image url source or website name .

### NAVMENU

This is the basic structure.

```
code source
1. <!-- Collect the nav links, forms, and other content for toggling -->
2. <div class="collapse navbar-collapse main-navigation" id="main-nav-bar">
3.   <ul class="nav navbar-nav navigation-box">
4.     <li>
5.       <a href="index.html">Home</a>
6.       <ul class="sub-menu">
7.         <li><a href="index.html">Home One</a></li>
8.         <li><a href="index2.html">Home Two</a></li>
9.         <li><a href="index3.html">Home Three</a></li>
10.        <li><a href="index4.html">Home Four</a></li>
11.        <li><a href="index5.html">Home Five</a></li>
12.      </ul><!-- /.sub-menu -->
13.    </li>
14.    <li>
15.      <a href="about.html">About Us</a>
16.      <ul class="sub-menu">
17.        <li><a href="company-overview.html">Company Overview</a></li>
18.        <li><a href="company-history.html">Company History</a></li>
19.        <li><a href="partners.html">Our Partners</a></li>
20.      </ul><!-- /.sub-menu -->
21.    </li>
22.    <li>
23.      <a href="...">....</a>
24.      <ul class="sub-menu">
25.        <li><a href="...">....</a></li>
26.        <li><a href="...">...</a></li>
27.      </ul><!-- /.sub-menu -->
28.    </li>
29.  </ul>
30. </div><!-- /.navbar-collapse -->
```

Add your own menu item to that ul li item. and if you want to add dropdown menu just make a nesting ul li with class of **sub-menu**

### FOOTER COPYRIGHT

```
code source
1. <section class="footer-bottom text-center">
2.   <div class="thm-container">
3.     <p>© Copyright Mellis 2023 . All right reserved.</p>
4.   </div><!-- /.thm-container -->
5. </section><!-- /.footer-bottom -->
6.
```
